### AI Hackathon - Surgery Scheduling Optimization

IBM Provider Analytics

DATA SCIENTIST

Dec. 2020

Estimating operative case-time duration accurately is crucial for operating room scheduling optimization. Our goal was to create statistical models on a large retrospective dataset to improve case-time duration estimation in comparison to current standards. A unique algorithm was designed to accurately anticipate surgery duration using a three-stage process that first uses previous utilization data and current waiting list information to manage case mix distribution.
