

About Me

I am a data engineer and scientist with over 15 years of experience in data integration, automation, and analytics, including 10 years in healthcare. Throughout my career, I have built scalable data architectures, optimized ETL workflows, and developed cloud-based data solutions to support business-critical operations. My work has helped organizations improve data accessibility, deployment efficiency, and decision-making through automation and engineering best practices.

Most recently, I designed an AWS data lake that significantly improved retrieval speeds and streamlined operations. By automating CI/CD, I helped cut deployment times in half, making data more accessible and reliable for the organization. While much of my recent work has been in healthcare, I have also contributed to other industries, giving me a versatile perspective on data engineering challenges.

Why MacroHealth?

Gemini's mission to redefine financial freedom excites me. Having worked in highly regulated environments, I appreciate the company's focus on security, scalability, and trust—core principles that align with my approach to building data systems that are efficient, reliable, and transparent.

The opportunity to apply my expertise in cloud data engineering, automation, and large-scale data processing to a dynamic, fast-moving industry like crypto is highly appealing. I am eager to contribute to Gemini's vision by developing scalable data pipelines, optimizing data modeling, and enhancing infrastructure automation to support mission-critical crypto operations.

Why Me?

With my experience in data lake engineering, ETL automation, and cloud-based analytics, I bring:

- Expertise in Python & SQL – Designed and optimized ETL frameworks, reducing data errors and increasing processing speeds.
- Experience with MPP Databases & Cloud – Worked extensively with AWS Redshift, Azure, and cloud data platforms, reducing troubleshooting time.
- Proven CI/CD & Data Automation Skills – Implemented CI/CD pipelines, cutting deployment times and increasing success rates.
- Cross-Team Collaboration & Leadership – Mentored junior engineers, introduced Jira and GitHub for tracking, and enhanced stakeholder reporting, improving data-driven decision-making.

While my recent experience has been in healthcare, I have a broad foundation in data engineering across industries and thrive in fast-paced, innovative environments. I would love the opportunity to bring my data automation expertise and engineering mindset to Gemini.

Thank you for your time and consideration—I look forward to hearing from you.
